SonTek
YSI incorporated

It's an immense goal - to build a river discharge measurement system without the traditional limitations. It had to be small, portable and so easy to use that anyone could make a measurement. It had to be so robust that it could be used just about anywhere in the world under extreme conditions. The results had to be immediately recognizable. Conceived to advance measurement practices, the **RiverSurveyor S5** and **M9** systems give a whole new perspective to the notion of open channel hydraulic measurements.

It's a SonTek exclusive - multiple acoustic frequencies fused with precise bandwidth control make for the most robust and continuous shallow-to-deep measurements ever. A deterministic microcontroller expertly apportions the proper acoustics, pulse scheme, and cell size so you can focus on the measurement - not the instrument setup. The system even has a vertical beam for precise channel definition - and it's all designed to work intuitively.

Leading edge technologies such as Bluetooth[®], spread spectrum radio, mobile phones, and RTK (Real-Time Kinematic) GPS are all incorporated to elevate performance and expand utility.

Complete 3-D velocity profiling, bathymetric measurement, and discharge calculation as you transect the channel

Features

Benefits

Multiple acoustic frequencies*	Combines the highest resolution with the greatest range of depths.
Vertical acoustic beam*	Superior channel definition, extends the maximum measurable discharge depth.
Automated cell size*	Always uses the optimal resolution for channel depth – no user input required.
Automated pulse scheme and frequency hopping*	Automatically adjusts the acoustic Doppler sampling (ping) scheme for channel conditions. User does not need to pre-program unit.
Microprocessor computed discharge and secure data*	All discharge computations are done within the S5 or M9 unit internally (not in the computer!) – No lost data from communications drop outs.
Standard 360° compass and two-axis tilt sensor	Compensates for vessel motion due to surface conditions.
Reverberation control with ping rates to 70Hz	High ping rates ensure extremely robust data collection.
Pulse-coherent processing	Maximizes high resolution performance in shallow water.
Bottom-tracking	High precision vessel tracking and depth measurement without GPS requirement.
RTK GPS (optional)	Ultra precise earth-referenced positioning as an alternative to bottom tracking in moving bed or other difficult situations.
